

Joseph R. Nemeth, D.D.S., Ma.C.C.S.

Joseph Nemeth was destined to become a periodontist. Now his fine-tuned skills and experience have led him to a Top Dentist designation.

"This is an exciting time to be a periodontist," Dr. Nemeth says. Cosmetically, "gummy smiles" – those smiles that show too much gum – are correctable either by repositioning the lip or by reshaping the gum. And if the gums have receded, a "long-in-the-tooth" look can be corrected by adding gum tissue.

The modern solution to missing teeth and dentures is dental implants, which are man-made replacements for natural

tooth roots. They often provide more permanence as well as better function and appearance than dentures.

"New technology and procedures have made it possible to regenerate lost bone and rebuild gum tissue," Dr. Nemeth says. "Teeth that would have been unsalvageable just a few years ago can now be saved." This is good news for the adult population, 50 percent of whom will develop some form of periodontal disease by age 35 – often without experiencing any symptoms.

Associates Robert Becker, D.D.S., M.S., and Amar Katranji, D.D.S., M.S., congratulate Dr. Nemeth on his

Top Dentist designation. Along with Dr. Nemeth, they provide excellent periodontal care, dental implants, and advanced bone grafting.

This summer, new laser technology arrives at Dr. Nemeth's Southfield office, promising to take the practice to even higher levels of excellence in periodontal care and patient comfort.
